## PERLICK'S NEW MARINE AND COASTAL GRADE UNDERCOUNTER REFRIGERATION WITH PERLICK ARMOR™

UNDERCOUNTER REFRIGERATION DESIGNED TO TACKLE THE ELEMENTS

Customers asked. We listened. Perlick created an upgraded version of our best-in-class undercounter refrigeration line designed to tackle the elements. Whether you own a home in coastal conditions, a boat, or a saltwater pool, the harsh effects of high-salt environments can wreak havoc and prematurely weather outdoor appliances. Perlick's new **Marine and Coastal Grade Undercounter Refrigeration** featuring Perlick Armor™ is built to endure the harshest environments while maintaining the consistent functionality and showroom quality finish you've come to expect from Perlick.

- Combines a mix of 316 and 304 stainless steel for food safety and easy cleaning rather than plastics, which can be found in some marine grade products
- A protective coating is applied to the refrigeration system for increased durability
- Units come equipped with upgraded 18-8 stainless steel and zinc plated fasteners to ensure rust won't form in attachment zones
- Our Perlick Armor™ upgrade package is available on all our HP and HH Series residential models

As the leader in high quality commercial refrigeration and bar solutions for the world's finest restaurants, bars, stadiums, and entertainment venues, Perlick offers homeowners the opportunity to bring that same level of quality into the comfort of their own home with our line of luxury residential products that blend professional level performance with exquisite style and modern functionality.

## BEER BASICS – TROUBLESHOOTING INFO

When you're expecting a full-bodied brew, a foamy or flat beer just won't do. If you experience excessive foam or no foam at all, chances are there is a quick and easy fix that will get you back to pouring the perfect beer in no time. Below are some of the most common beer dispenser problems and their solutions.

### PROBLEM: No beer is coming out of the tap

- **Check the gauge** to see if there is any pressure showing. It should read between 10-12 lbs. If not, your CO2 tank may be empty.
- **Is the shut-off valve in the vertical (on) position?**  
*\*Note: Diagram shows the valve in the off position (horizontal).*

### PROBLEM: Flat beer

- **Check the gauge.** Is the pressure between 10-12 lbs? If not, turn the pressure up to its appropriate level. Low pressure can cause beer to flatten and pour slowly.
- **Dirty glassware will cause the head on a beer to quickly disappear.** Make sure your glassware is free of impurities before pouring.

### PROBLEM: Foamy beer

- **Check the gauge.** Is the pressure between 10-12 lbs? If not, turn the pressure down to its appropriate level. Pressure that is too high can cause beer to overcarbonate in the keg and pour foamy.
- **Is the unit plugged in and cold?** Is the keg cold or, if purchased at room temperature, has it been in the dispenser for at least 24 hours? Attempting to tap a warm keg in a refrigerated unit will cause excessive foaming. Keep the temperature in the unit 36°-42°F, and make sure the keg is properly chilled before tapping.
- **Have you cleaned the equipment lately?** Regular cleaning of the system – from faucet to keg coupler – is important to keep beer stone, bacteria, and mold from building up. The factors listed above can quickly ruin a perfect brew!

36°-42°F

## WITH FORWARD SEALING FAUCETS, YOU'LL NEVER LOOK BACK

- 304 stainless steel construction won't pit or tarnish
- The flavor of the beverage will not be tainted
- Patented forward sealing design eliminates the need for a valve shaft exposed to beer and air
- Spout angle is more vertical, allowing more thorough draining after each pour
- No horizontal area for beer to collect
- NSF-approved

Perlick's patented forward sealing design eliminates the need for a valve shaft exposed to beer and air.
